Waste separation: clean, simple and stylish

Waste is waste. Or is it? In places where people need to dispose of PET, aluminium, glass and other recycling items besides general waste, our Sorter-Shark is the answer. This master of waste-separation makes litter disposal clear and easy to understand at a glance, in a way that transcends language barriers. What is more, it is available in numerous sturdy yet stylish configurations, suited to outdoor or indoor use.

Clever, intelligent and aesthetic design

Your Sorter-Shark will be built with between two and four waste-separation units and labelled according to your requirements. The Sorter-Shark can be adapted to suit all locations and circumstances: for example, it can be fitted with a weather-protective roof for outside use, or an ashtray unit in spaces where smokers congregate. The sloped sides of the openings guide the discarded waste items efficiently into the sacks below, while the pull-out drawer allows for quick, easy and touch-free sack replacement. The Sorter-Shark's large capacity means a significant reduction in the number of times it needs to be emptied – thus saving time and money.

Individual configuration

The Sorter-Shark can be customised according to your requirements, depending on location and usage. For example, it now comes with the option of a small roof which protects it from the elements, making it suitable for outdoor areas as well as indoors. In smoking areas, the waste bin can be fitted with an ashtray module, which comes with an inner container that makes emptying simple, and a cover on which cigarettes can be extinguished.

Each model can be fitted with a small weather-protection roof for outdoor use.

The doors of the Sorter-Shark are pulled out on one side. The swing-out sack-holder ring makes emptying easy.

An ashtray module with a capacity of approx. 15 litres can be fitted as an optional extra.

The M3 and M4 Sorter-Sharks are easy to transport and relocate.

Depending on the number of separation units you choose, the Sorter-Shark has a swing-out sack holder ring or an inner bin.

Flexibly-configured and vandal-proof

Fire, graffiti and other vandalism are no match for the Sorter-Shark. Thanks to its solid chrome steel casing and robust locking

mechanism, it is built to withstand all manner of damage, as well as being low maintenance and easy to clean. The new welded-base construction and concrete base give the Sorter-Shark even greater stability and flexibility for deployment at a variety of different locations. It can be moved quickly and easily using a pallet trolley or taken away for cleaning at short notice.

	Dimensions H x W x D	Weight
Sorter-Shark M2	963 x 676 x 520 mm	120 kg
Sorter-Shark M3	963 x 945 x 520 mm	155 kg
Sorter-Shark M4	963 x 1215 x 520 mm	223 kg
